## CHINA/CUBA: A NEW DANGEROUS AXIS

MANUEL CEREIJO

SUMMER 2001

The fall of communism has not reduced the level or amount of espionage and other serious intelligence activity conducted against the United States. The targets have not changed at all: there is still a deadly serious foreign interest, and mainly from the new China/Cuba consortium, in traditional intelligence activities such as penetrating the U.S. intelligence community, collecting classified information on U.S. military defense systems, and purloining the latest advances in the nation's science and technology sector.

There is also a growing importance in maintaining the integrity of the country's information infrastructure. Our growing dependence on computer networks and telecommunications has made the U.S. increasingly vulnerable to possible cyber attacks against such targets as military war rooms, power plants, telephone networks, air traffic control centers and banks. China and Cuba have increased their cooperation in this area through the Bejucal base in Cuba, as well as in Wajay (near Bejucal), and Santiago de Cuba. On these bases they use technologically sophisticated equipment, as well as new intelligence methodologies that makes it more difficult, or impossible for U.S. intelligence agencies to monitor or detect.

The international terrorism threat can be divided into three general categories. Each poses a serious and distinct threat, and each has a presence already in the United States. The most important category is the state sponsored threat. This category, according to the FBI, includes the following countries: Iran, Iraq, Syria, Sudan, Lybia, Cuba, North Korea. Put simply, these nations view terrorism as a tool of foreign policy. In view of this list, we need to evaluate the recent trip made by Fidel Castro.

There are three main areas of concern for us in the new and dangerous axis formed by China and Cuba: radio frequency weapons, computer technology, missile capabilities. The problem with the Chinese Cuban rapprochement is that it is driven by mutual hostility towards the United States.

Radio frequency weapons are a new radical class of weapons. Radio frequency weapons can utilize either high energy radio frequency (HERF), or low energy radio frequency (LERF) technology. HERF is
